Experience

Cyclebreeze Research and Development

Full Stack JavaScript Developer | 08/2022 - 12/2022

Built server architecture and database design for various projects.

Translated UI designs to pixel-perfect web clients.

Worked with development teams to build software products for clients.

Developed dashboards for various products including an ecommerce platform, Cashiet, LiveSaver, etc.

Carried out code reviews and debugged existing code built by previous developers.

Dantown Assets Limited | Rivers, Port Harcourt

Front-End Developer | 06/2022 - 12/2022

Worked with a team of developers to build dashboard systems for the company's main product - Dantown mobile app, both for users, managers, and the CEO.

Developed user interfaces for the official website and blog pages based on the design from the product team.

Contributed to the development of a wallet-as-a-service product to provide wallets for startups and businesses who cannot afford the services of a blockchain developer

Vendorcrest Digital Solutions | Imo, Owerri

Web Developer | 04/2021 - 05/2022

I was responsible for developing the official website of the company.

I worked on both the website frontend, backend, and database for saving information from our contact form.

Managed the mailing system for quick responses and transactional emails.

Maintained the website as well as servers needed for the smooth running of the website.

Skills

Front-End Development, Typescript, CI/CD, Git, Node.js, REST, PostgreSQL, MongoDB, AWS, GCP, Docker, Query Optimization, Test Driven Development, Object Oriented Programming, Data Structure and Algorithm, Communication skills, Time management, Agile Methodology, Critical Thinking, Troubleshooting, Debugging, Secure coding practices, Testing, Quality Assurance

Projects

[Venpay API \(Most recent\)](#)

Design and development of Backend/API architecture of fintech app for instant payments and scan-to-pay features.

Database design and query optimization to reduce response times and make the app run 6 times faster.

Implemented email and push notifications to alert users of transactions.

Employed an Event Driven Development approach and a Service Oriented Architecture to ensure the decoupling of several parts of the API to improve reliability.
